Tridion Sites 2026 Q2 + Q3 Roadmap

Self-Portrait, Sara Cain 2020

<https://www.nga.gov/artworks/223873-self-portrait>

Changes in quarterly update

- There will be a 10.1.4 release at the end of September supporting .NET 10
- There will be no 10.5. Instead, we will be releasing Sites 11 in the summer of 2027.
- Both 10.0 and 10.1.* are going to have Full Support (aka Standard Support) extended until **December 2028**.

Platform details for 10.1.4

- No plan to add new OS/DB platforms support into 10.1.4. 10.1.4 supports same OS/DB as 10.1 version.
- .NET 10 support added
- Update to SOLR 9.10.1 with mitigated tika jar vulnerability
- Some 3rd party libraries updates.

Heads up for an XSLT issue

- In November 2026, Chrome is no longer going to support XSLT in the browser, a technology that has been around since 1999. See <https://developer.chrome.com/docs/web-platform/deprecating-xslt>
- This is going to have a large impact on a wide range of web applications, not just Tridion. If your IT department isn't already aware of this, let them know because this may cause several other systems to no longer be functional.

For Tridion, the impact is going to be on the ClassicUI. Since some functionality is only available in the ClassicUI, we are going to be asking everyone to apply a hot fix that we will release in late **August 2026**. The plan is to provide fixes for Sites 9.1 and above. If you are on a really old version of Sites, please reach out to us so that we can talk about a plan.

RWS Support will be issuing a formal KB Article with the details, but we want to give everyone advance notice.

01.

Tridion Suite Updates

These updates are for all the products in the Tridion Suite (Sites, Docs, Tridion One)

Two announcements

Tridion Connect. Tridion Agent.

Two products built around the same point of view on agents and content.

The kinds of signal Connect speaks to.

Curated connectors at GA, with a customer-extensible framework for the rest. Tell us where you'd plug in next.

REGULATORS

Regulatory feeds

FDA, EMA, MHRA, FAA, financial regulators. Clause-level change capture.

STANDARDS

Standards bodies

ISO, IEC, ANSI, IEEE. Revision diffs against your referenced editions.

PRODUCT

Product specifications

PLM, ALM, requirements systems. Engineering change orders piped in.

INTERNAL

Your own systems

Ticketing, knowledge bases, change logs. Bring-your-own connector framework.

A new starting point for authoring.

The change arrives in your inbox the way a — except it already knows which topics are the diff means, and what the first draft of t should look like.

- SECURE • SCOPED TO YOUR DATA
- ACCURATE • GROUNDED IN YOUR
- EXPLAINABLE • FULL TRACEABILITY

The screenshot displays the Tridion Connect interface, which is a regulatory feed. The top navigation bar is dark purple with the 'rws' logo and 'Tridion Connect' text. On the right of the bar are a notification bell icon and a user profile icon labeled 'JS'.

The main content area is divided into two columns. The left column, titled 'WORKSPACE', contains a 'SOURCES' section with four items: 'Northbridge Ther...' (Tridion Docs · 4 sources), 'EUR-Lex' (Regulatory), 'EMA Guidance' (Pharma · EU), 'FDA Updates' (Pharma · US), and 'ICH Council' (Standards). Below this is an 'Add a source' button with a plus icon. The right column, titled 'DRIVERS', features a 'Recent updates' section with the subtitle 'Picked up from 4 connected sources'. It lists three updates: 1. 'Q&A revision on biosimilar comparability evidence' from EMA (1h ago), which clarifies expectations for analytical similarity data packages. 2. 'Draft guidance – real-world evidence in label expansion' from FDA (4h ago), with a comment window opening on June 1 and closing on August 30, 2026. 3. 'M11 protocol harmonization – step 4 sign-off' from ICH (1d ago), noting the final template release and member state adoption through 2027. Below the updates is a button with a plus icon and the text 'Select a driver to see impact'.

At the bottom of the interface, the text 'CONNECT · REGULATORY FEED' is visible.

Tridion Connect · regulatory feed picking up updates from EMA, FDA and ICH sources

Tridion Agent.

IN ONE LINE

The agentic AI layer across the entire Tridion platform.

WHAT IT GIVES YOU

Automation, tools, and integrations for agents — plus the ability to build and orchestrate your own.

Agents across Docs, Sites, and the platform.

DELIVERY

Agents query Tridion in real time. Your structured content as grounded answers, with citations.

AGENT LAYER

Automation · Permissions · Tools · Integration · Orchestration — built once, used everywhere.

CONNECT

External signals plugged into the same agent runtime.

AUTHORING

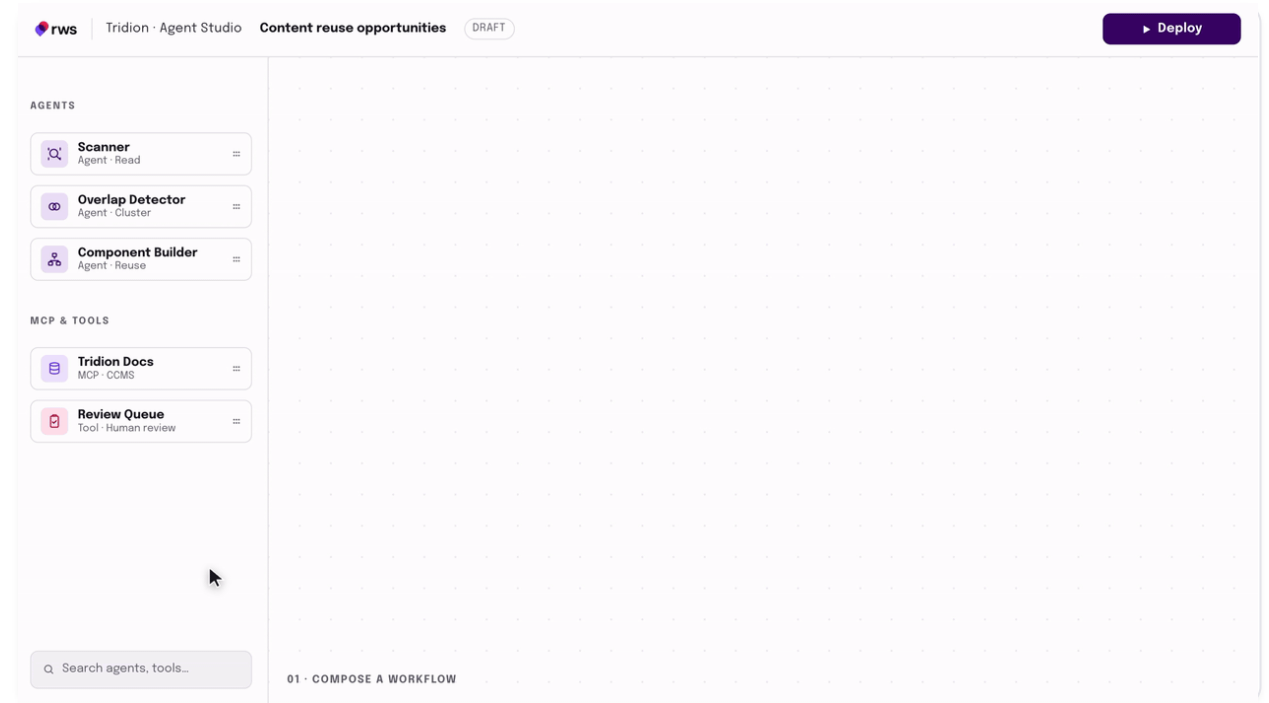

Tridion Docs · Tridion Sites — the products you use today, with agents working alongside your team.

Build and orchestrate your own agents — without leaving Tridion.

You know your content workflows better than we do.

Tridion Agent gives you a workspace to compose, test, and ship agents that encode that knowledge — the same way your authors already work, just delegated.

- **Compose** from native and custom tools.
- **Govern** with the permissions and controls you already use.
- **Deploy** for use across the platform.

Tridion Agent Studio · composing a content-reuse workflow from agents and MCP tools

Tridion Live Sessions 2026 | On-demand

Tridion Live Sessions 2026 is now available on-demand!

What does the agentic AI era mean for your content operations?

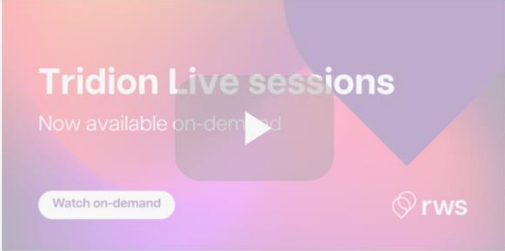

These seven sessions answer that directly - from the Tridion AI Platform launch to an unfiltered perspective from Dell Technologies.

Discover:

- The Tridion AI Platform launch - Tridion Agent and Tridion Connect - Greg Chapple
- How agentic AI works with governed, auditable structured content
- Managing AI-driven change in enterprise documentation - Erik Bremer, Dell Technologies
- AI MCP and the future of intelligent content delivery - Greg Guttman
- Linguistic AI and translation at scale - Bart Maczynski, Language Weaver
- Tridion Docs, Tridion Sites and DXD roadmap updates - Josh Steen and Justin Harrison
- The new Tridion Customer Success model - Frank Closset

Register today and watch all sessions on-demand.

Please fill in your details below to watch the webinar recording

The banner features a purple and pink gradient background. It includes the text 'Tridion Live sessions' in white, 'Now available on-demand' with a play button icon, a 'Watch on-demand' button, and the 'rws' logo.

Product Releases

History of AI and Tridion

Tridion Sites 11 Coming Summer 2027

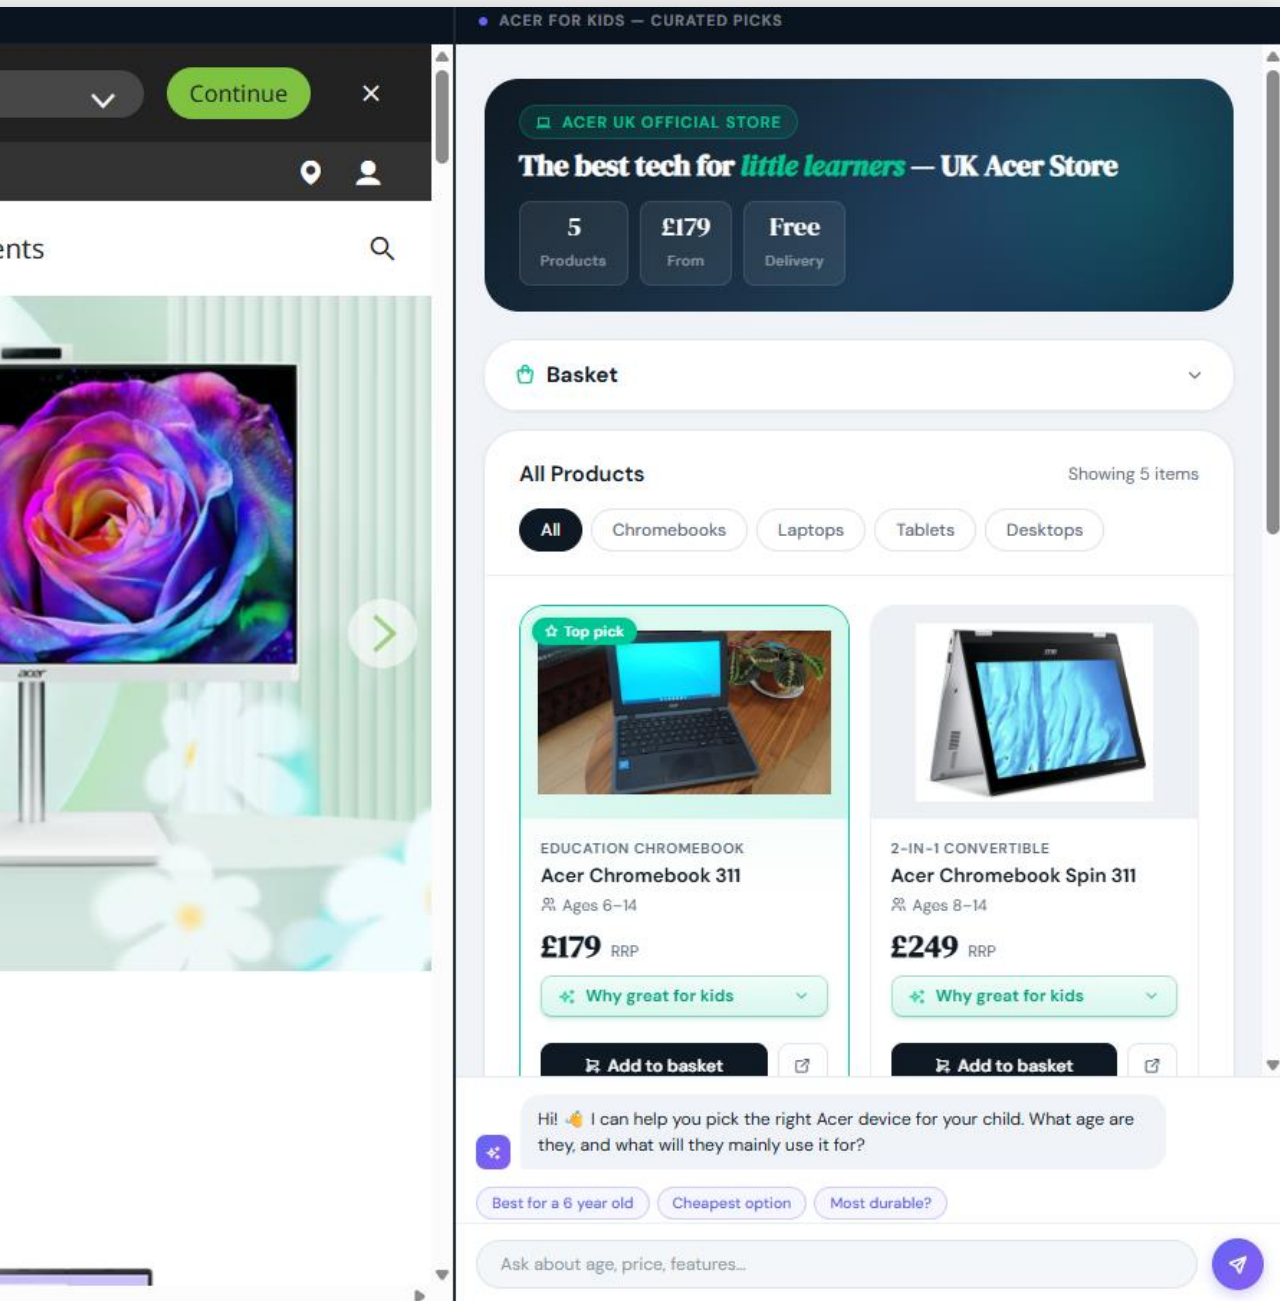

Current plans

03.

Model Context Protocol (MCP) Server

More improvements on the MCP Server that was released with 10.1.3

<https://tridion-videos.s3.us-west-1.amazonaws.com/tridion-sites/tridion-sites-10.5/Sites+10.5+-+MCP+Server.mp4>

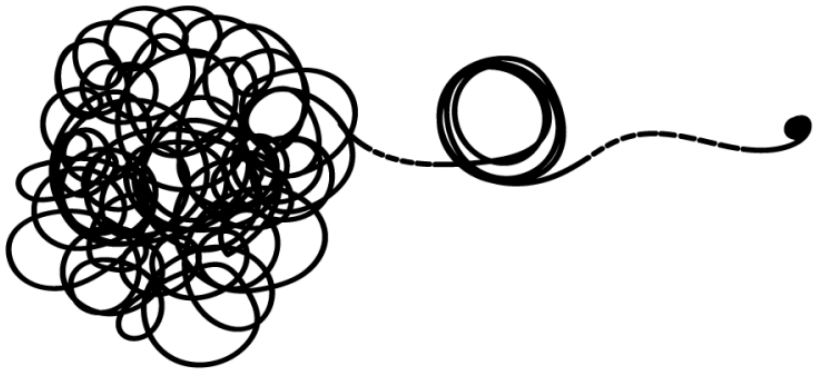

Hyper-Personalization

Hyper-personalization at enterprise scale is the capability of a large organization to deliver highly individualized interactions, content, products, or services to each customer or user – in real time, across every touchpoint.

This is achieved by leveraging data (Tridion Sites), AI (Tridion AI), and automation at massive volume without sacrificing relevance or quality.

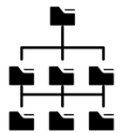

“Creating an experience shaped around what your customers need to do”

Simplicity at Scale

Managing complex content eco-systems can be hard, impossible to visualize and challenging to keep fresh and relevant

With improved blue-printing visualisations and **specialised AI agents trained on your Blueprint**, we aim to **turn complexity into simply talking**.

Traversing
complex
content trees

Asking Simple
Questions

Efficient Release Management

Today, releases are characterized as large, time consuming, increasingly expensive and potentially high-risk activities.

Our goal is to ensure that **all our customers can use the latest features** as soon as they are ready

- 1** The remainder of 2026 and into 2027 we will dedicate a team to the getting **customers to the latest version**
- 2** Creating **smaller, more frequent releases** will help reduce risk, minimise time allocation and enable you to benefit from improvements sooner.
- 3** **Evolving the “Add-on framework”** to deliver new product features through product marketplace.

03.

Recap of 10.1

- Granular BluePrinting
- Translator Context View

Benefits of Granular BluePrinting

Much better control and governance

Vast improvement over current

Can eliminate processes and workarounds

Auto cascade of the parent field to the child components

Easier make content changes at scale

Can allow a much more efficient content model

Will allow for a consolidation of multiple components into a single one

“The changes related to BluePrinting in 10.1 mark the first changes in this area since the possibility of promotion and demotion of items in the BluePrint hierarchy, introduced in Web 8 in 2015. Allowing non-localizable fields will significantly enhance managing content for localized digital experiences.”

– Ron Grisnich, Trivalent (RWS Partner)

BluePrinting for Site and Content Management

Organization
Governance / Workflow
Central Content

Brand
Design

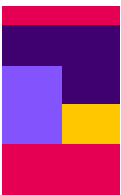

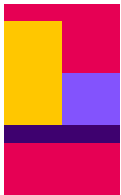

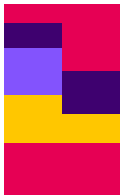

Product
Scheduling

Market
Regional Adaptations
Product Availability

Localization
Translation
Transcreation

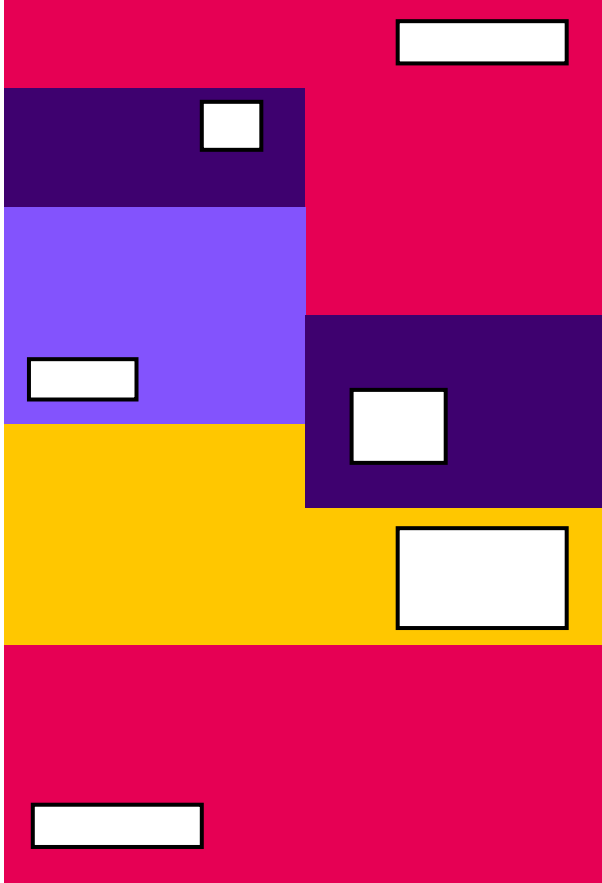

...

Thousands of variations can be managed by
BluePrinting without duplication.

"Don't repeat yourself"
DRY Principle

Now with Granular BluePrinting ...!

Field Level Inheritance on both the content and meta data fields

Common use cases:

- Lock down immutable information like product SKUs
- Mesh HQ specific and Brand specific information in a single component
- Cascade parent changes to children
- Simplify content model and remove work arounds

Also applies to Pages and Regions!

And don't worry...your existing schemas will continue to work as is!

BluePrinting 3.0 Component Example

Additional
10.1 Features

Component template field updates

Increased field width and sorting templates alphabetically

Differentiate activity filter options

The publication title has been included to differentiate the filter options for:

- activity definition,
- process,
- process definition.

The image displays two screenshots of the Tridion Sites 'Workflow Activities' interface, illustrating different filter options.

Left Screenshot: The 'Workflow Activities' table is shown with the 'Activity definition' filter selected. The filter dropdown menu is open, showing options: 'Approve', 'Approve', 'Approve', 'Approve', 'Approve', 'Approve', and 'Clear filter'. The table columns are 'ACTIVITY DEFINITION', 'DATE ASSIGNED', 'ASSIGNED TO', and 'PUBLICATION'. The table data includes activities like 'Approve' and 'Create / Update' assigned to various users and publications.

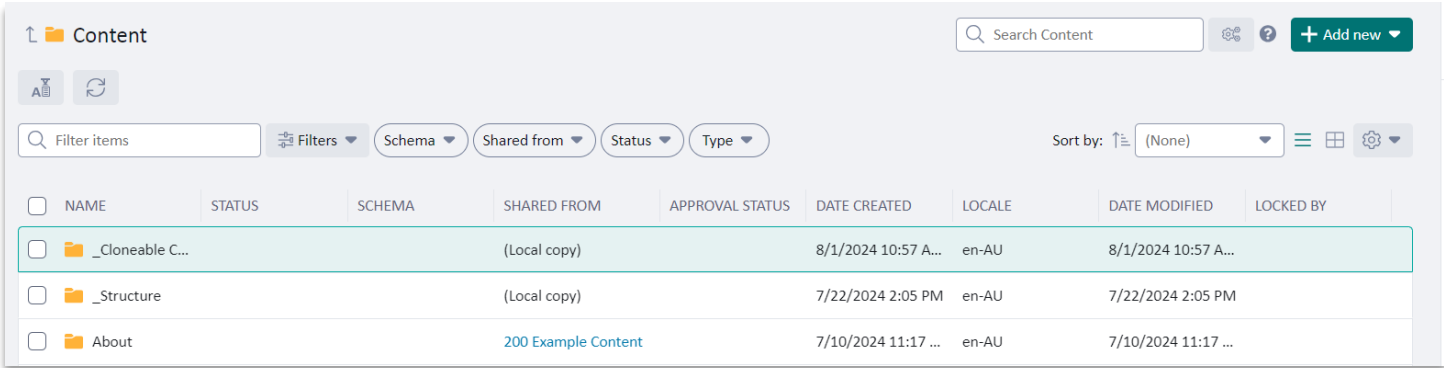

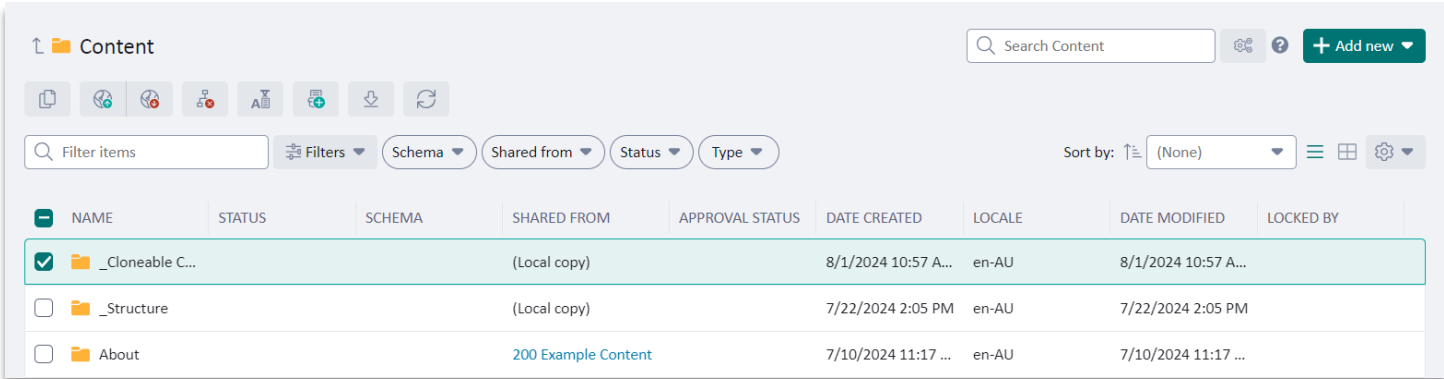

Right Screenshot: The 'Workflow Activities' table is shown with the 'Process' filter selected. The filter dropdown menu is open, showing options: 'Task Process - 000 Empty', 'Task Process - 100 Master', 'Task Process - 110 DXA Site Type', 'Task Process - 200 Example Content', 'Task Process - 400 Example Site', and 'Clear filter'. The table columns are 'ACTIVITY DE...', 'DATE ASSIG...', 'ASSIGNED TO', and 'PUB'. The table data includes activities like 'Perform Task', 'Review Task', 'Assign to Pro...', and 'Perform Task' assigned to various users and publications.

Focus but don't select first item

When browsing an organizational item, the first item in the list was automatically focused and selected.

We updated this behavior to focus but not select the first item.

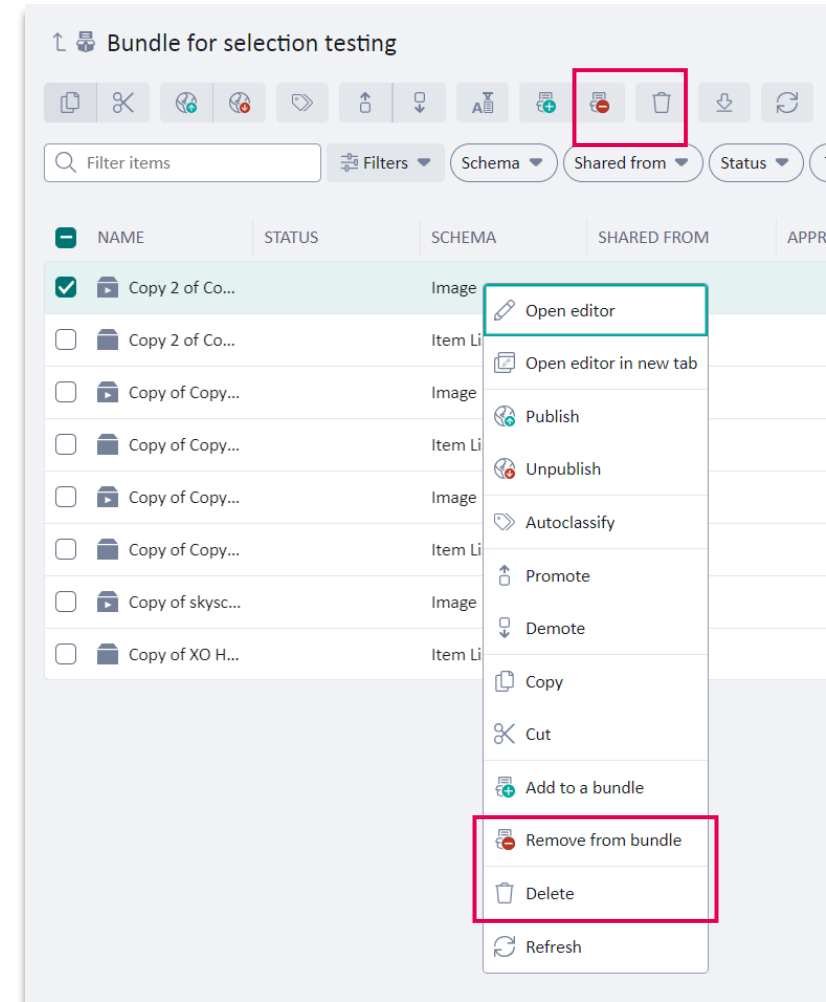

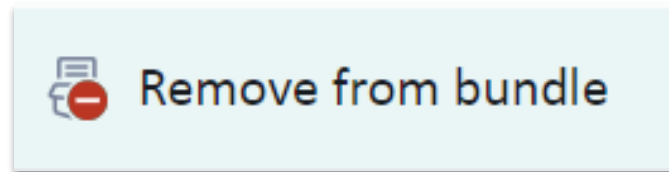

This will reduce the likelihood that users unintentionally perform actions on the first item (see [SRQ-25640](#)).

The delete action is now available in bundles and search folders

Introduced a new icon for the Remove from bundle action.

Now displaying the delete action when inside a bundle or search folder.

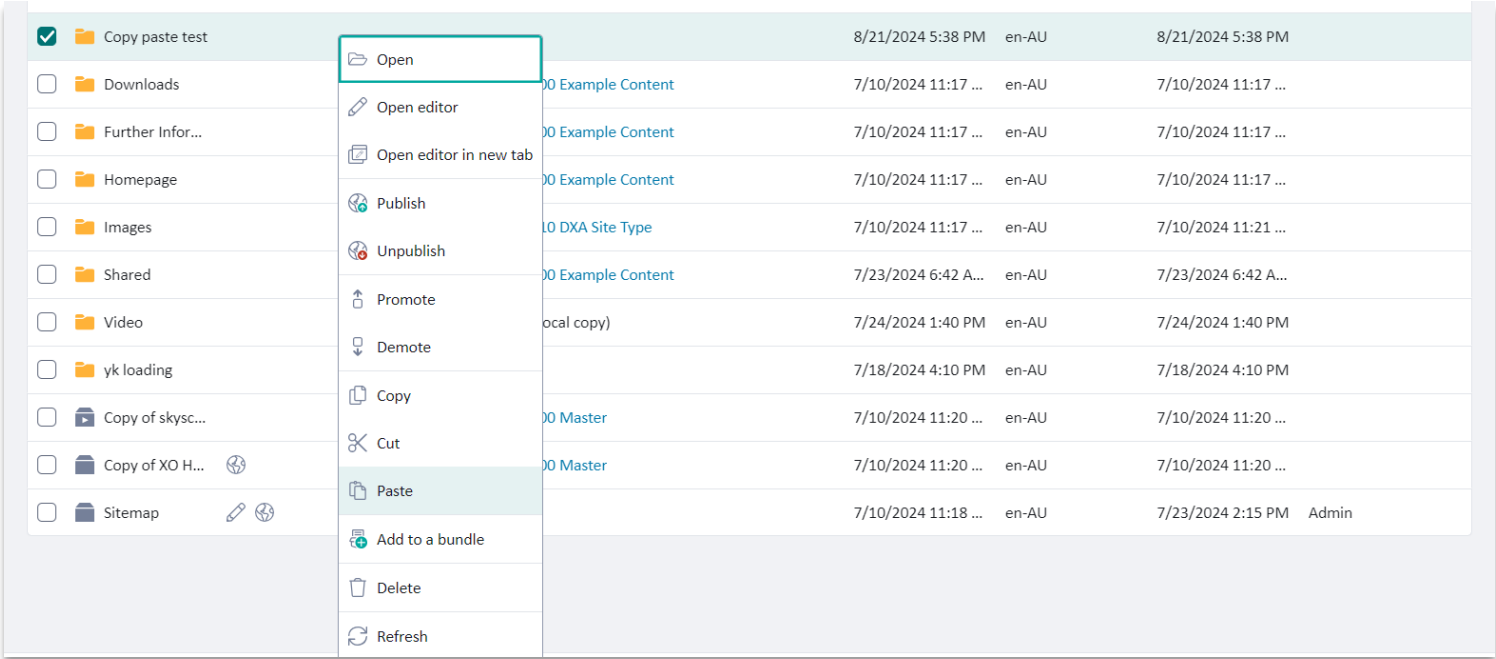

Copy/paste fix

Copy/paste behavior is now aligned with the behavior in Classic UI and Windows Explorer.

When pasting into a folder (or other container item) via the context menu, the item(s) will be pasted inside the folder.

Previously, the items would be pasted at the same level as the folder.

This change applies to both the tree and the table.

Filter out non-applicable activities

The screenshot displays the Tridion Sites interface with a list of workflow activities. A 'Finish activity' dialog is open, prompting the user to select the next activity. The network log on the right shows a REST API response for a translation review activity, with the 'nextActivityDefinitions' section highlighted.

CoreService REST Get items improvements

Added additional filter options
rlolItemTypes filters by item type
recursive, set to *true* returns
items from all levels of the
nested organizational items
details, controls the details
level such as *Contentless*,
IdAndTitle,
WithApplicableActions must be
returned for each item

Name	Description
escapedContainerId * required string (path)	The TCM URI or ECL URI of a container item: either a Publication or an Organizational Item such as a Bundle, Category, External Container, Folder or Structure Group. Escape the colon by replacing it with an underscore. For example: "tcm_0-1-1". escapedContainerId
useDynamicVersion boolean (query)	Loads a dynamic version (if available for the current user) false
rlolItemTypes array[string] (query)	The item types of all repository-local objects that you want to include in the response. Page, PageTemplate, TargetGroup, Category, Keyword
recursive boolean (query)	If false, only items directly inside the given container are returned. If true, items in nested Organizational Items (recursively) are also returned. For External Containers this parameter is ignored. External Content Library does not support recursive lists. false
details string (query)	Specifies the level of details of list entries. Contentless

Additional Items (also available as hotfixes for 10)

- Display a notification if there's an error when attempting to publish an item
- Miscellaneous UI
 - Various improvements to component template selection
 - Differentiate activity filter options by including the publication
 - Focus but don't select the first item in the table/grid on browse
 - Add delete action for items in bundles and search folders
- Pasting via the context menu on a container should paste inside the container
- Improved stability of rich text editor when running extensions
- Filter out non-applicable next activities in translation workflows
- Allow users to select the assignee for the next activity

10.1 Platform Updates

Content Manager

- ✓ Support of TLS 1.3
- ✓ Java 21 support
- Tridion Search Upgrade – work in progress
 - SOLR to v 9.6
 - Apache Tomcat to v 9

Content Delivery

- Java 21 LTS
- Spring 6
- SpringBoot 3
- Hibernate 6
- Tomcat 10
- Jakarta namespace switch

Long-Term Support for 10.1

Moving to .NET 8 required some significant code changes and therefore we have decided not to backport those changes to 10.0. Instead those changes are going to be rolled in 10.1 where we will be able to do more exhaustive testing than with a backport hotfix.

But to help our customers with their planning, we have decided to make 10.1 into a Long-Term Support release.

Note that 10.0 LTS customers can still stay on the older versions of .NET if they need more time before upgrading to 10.1.

04.

Recap of Tridion Sites 10.1.1 Launched June 4, 2025

Primary Feature:

- Advanced Search in Experience Space

Experience Space Search

New Advanced Search feature

Parity with Classic UI supporting:

- ✓ Searching in all content (everywhere) or limit to item names or descriptions only
- ✓ Search within a certain context (folder) with or without including subfolders
- ✓ Filter search results by using same filter options as provided in Classic UI
- ✓ Option to save your search query and reset

Experience Space Search

Extras in Experience Space:

Columns:

Re-ordering (drag and drop)

Additional sort options

Change visible columns per user via Column configurator

Settings saved

Recap Tridion Sites 10.1.2 December, 2025

Primary Features:

- Translations view in Experience Space
- Translation Job improvements
- Workflow Activity Revert
- Custom Defaults
- REST API

Translations view in Experience Space

- ❖ Similar to Activities and Publishing
- ❖ Only appears when Translation Manager is installed
- ❖ Same columns as Classic UI (by default) + "Created by"
- ❖ Optional columns (via configurator)
 - Modified by
 - Date Created
 - Date due
 - Action
- ❖ Filters (Including free text filter)
- ❖ Sort (Including quick sort by clicking on headers)

The screenshot displays the 'Translations' view in Tridion Sites. The interface includes a top navigation bar with 'Content', 'Activities', 'Publishing', and 'Translations'. Below the navigation bar, there's a search bar and a 'Filters' dropdown. The main area shows a table of translation jobs. The table has the following columns: NAME, DATE MODIFIED, TYPE, LANGUAGE, PUBLICATION, PROGRESS, STATUS, and CREATED BY. The table contains 27 rows of data, each representing a translation job. The status of each job is indicated by a colored pill (e.g., 'DEFINITION', 'COMPLETED', 'CANCELLED', 'PENDING FOR TRANSLATION', 'PENDING RETRIEVAL'). The 'Created by' column shows the user responsible for each job.

Notifications

Warning

The Item is currently not in the Translation Manager Retrieve workflow activity in Tridion Sites; retrieval of the item will be retried later.

Translations view – Actions

- ❖ Open editor
- ❖ Clone
- ❖ Retry
- ❖ Send for translation
- ❖ Delete
- ❖ Export
- ❖ Refresh

Note that for 10.1.2, all actions except export can only be performed on individual jobs.

Translation Job Editor

Updated existing translation job modal dialog to support

- ❖ Creation of jobs in definition state
- ❖ Adding items for translation to an existing job
- ❖ Editing and viewing of existing translation jobs
- ❖ Send items for translation

AG Grid was replaced with our own table to ease development and reduce technical debt.

Still to do

- ❖ Tabs: added items, resolved items and notifications

"Task Process A" has been successfully reverted.

Custom defaults

Different customers have different requirements when it comes to default dialog values and general UI behavior.

Starting in 10.1.2, admin users will be able to use the Rest API to customize: defaults for the Publish/unpublish dialogs, open behavior for item editors (same versus new tab), whether the link to Classic UI is displayed

In this PI, we've added support for four fields in the publish/unpublish dialogs.

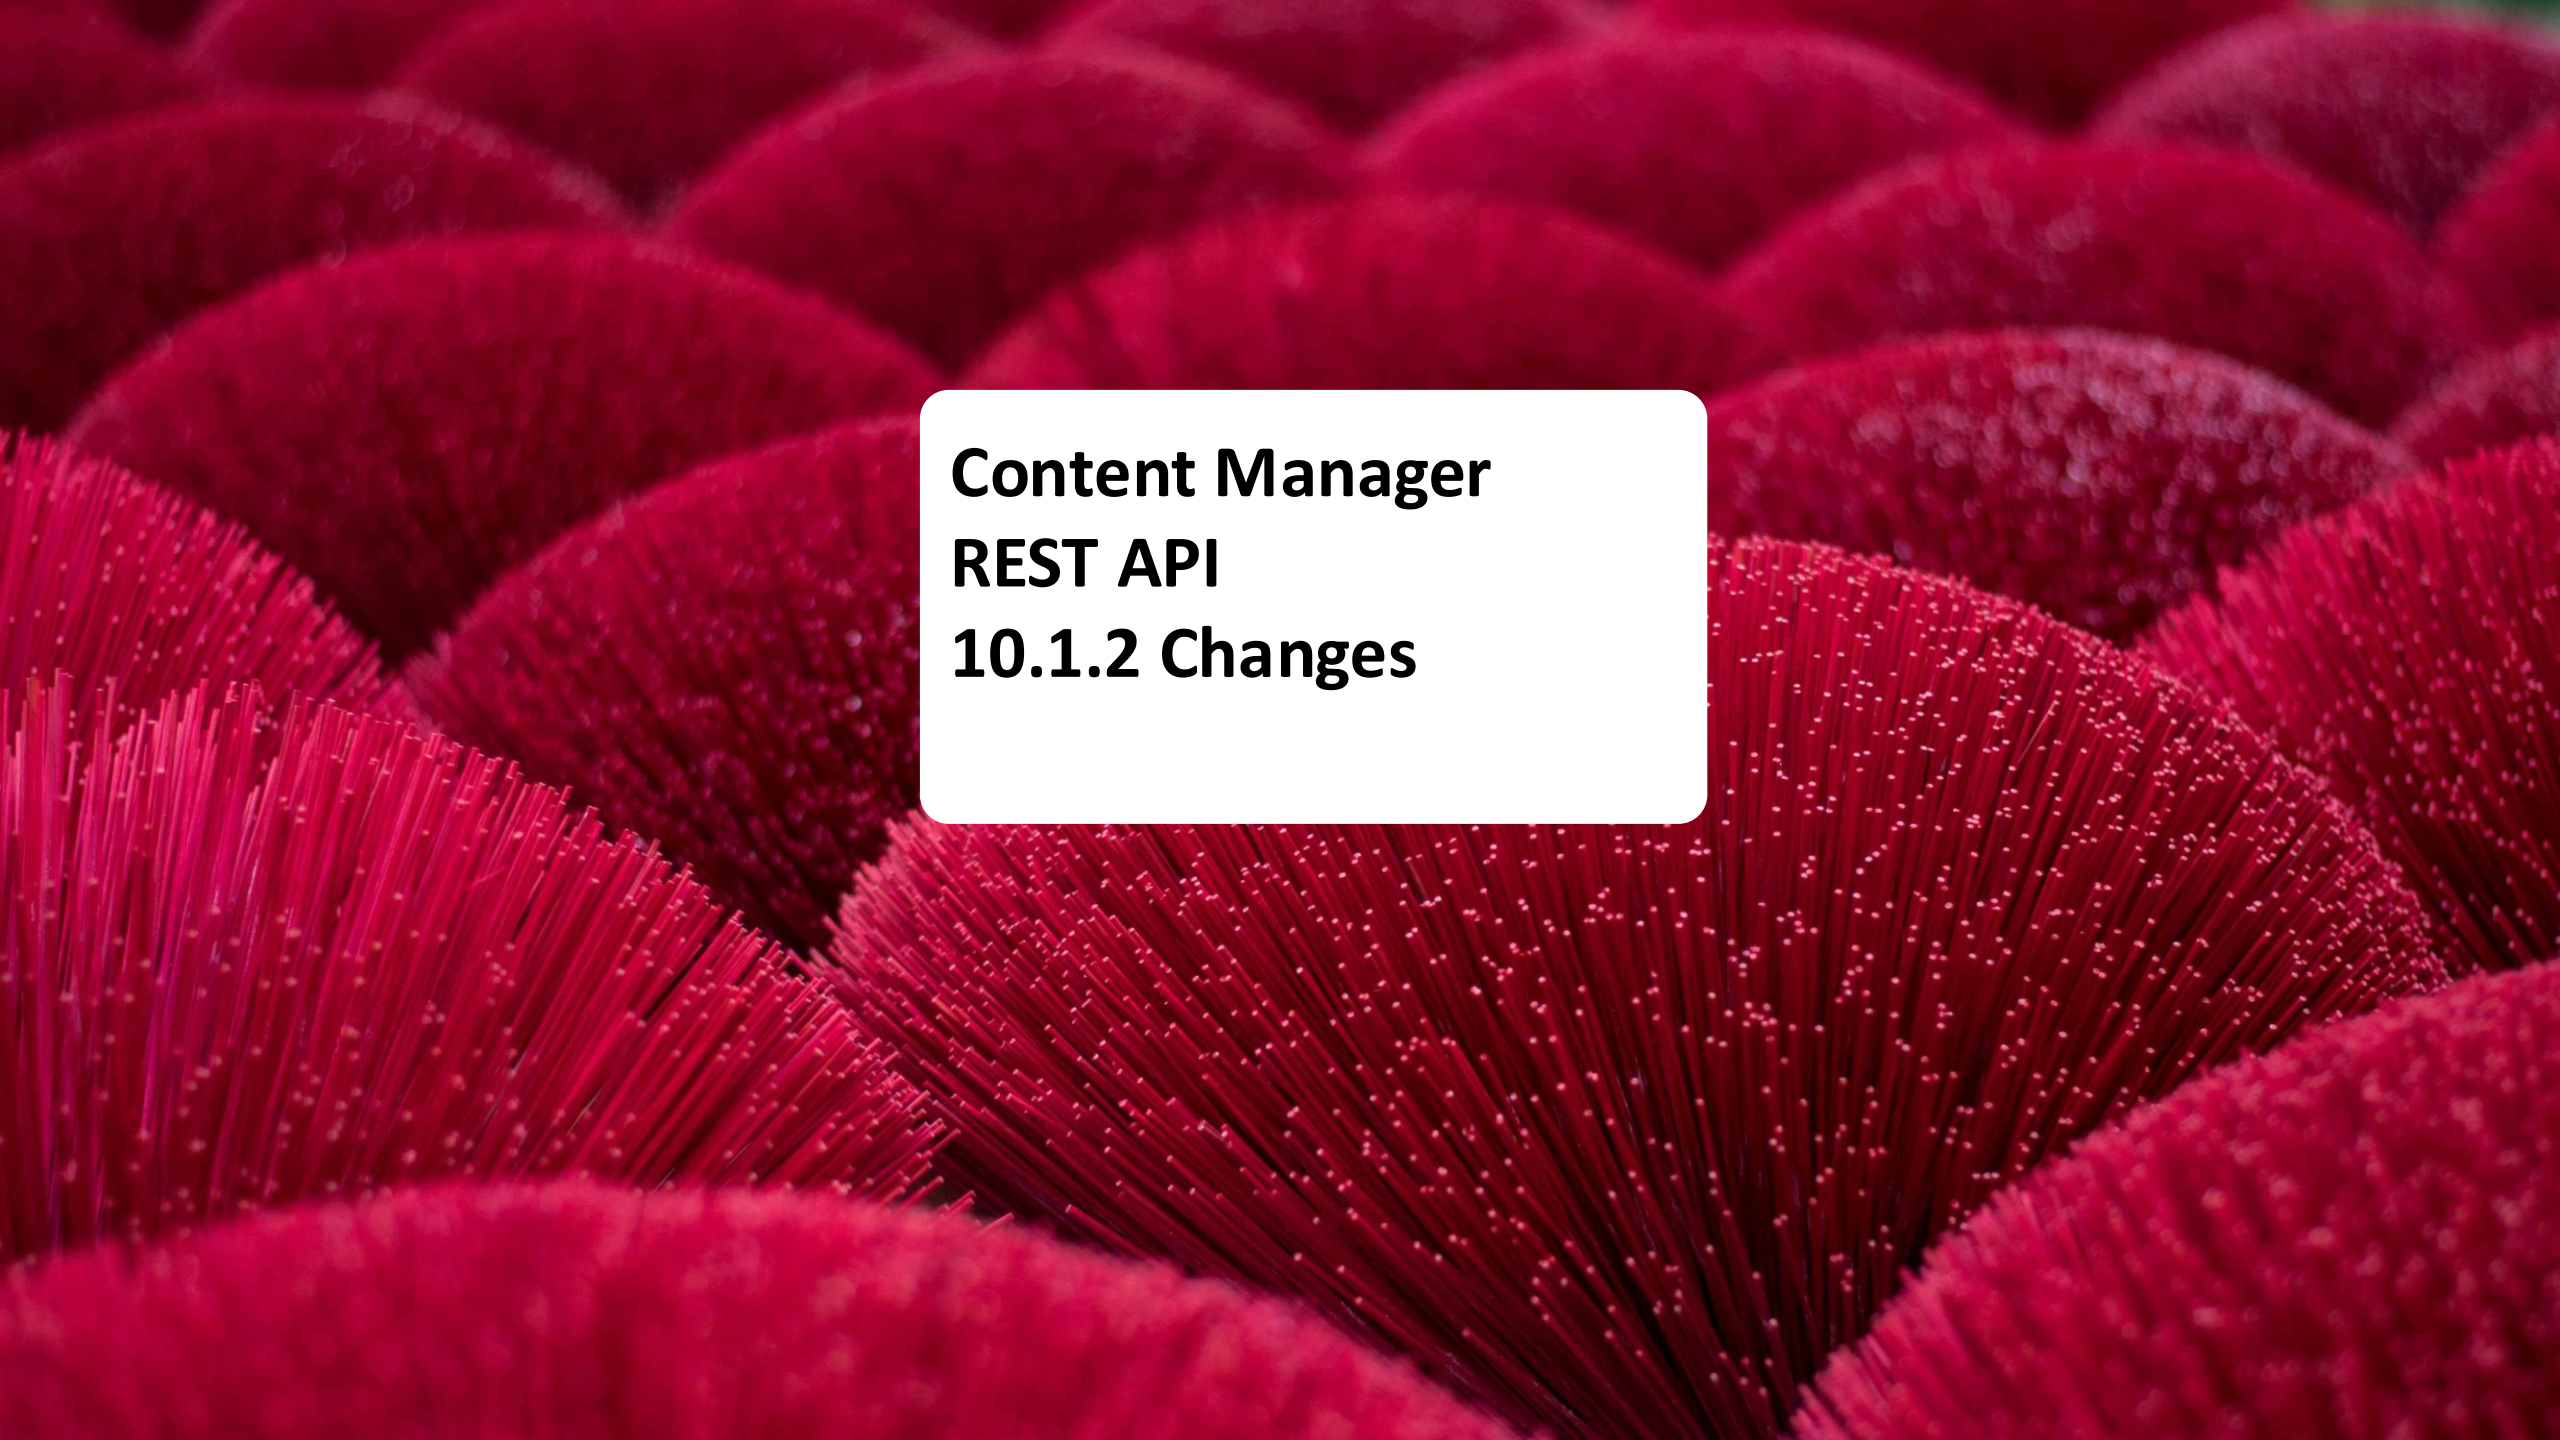

Additional customization options will be added in the upcoming PI and future releases.

Custom defaults

Here's an example configuration showing how to set defaults for the four publish dialog settings currently implemented.

```
{
  "$type": "Settings",
  "Data": {
    "defaults": {
      "publishing": {
        "publishNewContent": false,
        "includeComponentLinks": false,
        "includeItemsInProgress": false,
        "targetTypeIds": [
          "tcm:0-2-65538",
          "tcm:0-2-65538"
        ]
      }
    }
  }
}
```

Note that these defaults always override the user's last selection. We might add an option to allow customers to specify whether these defaults can be overridden.

The background of the slide is a close-up photograph of numerous red fiber optic cables. The cables are bundled together and fan out, creating a dense, textured pattern of fine lines. The lighting is soft, highlighting the individual fibers and the overall red color of the bundles.

Content Manager REST API 10.1.2 Changes

Translation Manager resolved items

New endpoints

GET resolved items for existing job

POST resolved items for new (unsaved) job

Processes a list of added items and returns those that are eligible for translation – either already sent or ready to be sent to translation

For example, you send a bundle to translation. Resolved items will help you to check which items from this bundle will be sent to translation such as bundle itself, or components, pages, or organizational items

GET /api/v3.0/translationJobs/{jobId}/resolvedItems Get resolved items for existing translation job.

This operation returns an instance of 'TmResolvedItem' type.

Parameters Cancel

Name	Description
jobId * required integer (\$int32) (path)	The ID of the translation job to get resolved items for. jobId
includeItemsInvalidForTranslation boolean (query)	Include items that is not valid for translation. (Tridion.TranslationManager.OpenApi.V3.Dto.TmResolvedItem.Comment) property explains why item considered to be not valid for translation. false
details string (query)	Specifies the level of details in the returned items. IdAndTitleOnly

POST /api/v3.0/translationJob/resolveItems Get resolved items for new (unsaved) translation job.

This operation returns an instance of 'TmResolvedItem' type.

Parameters Cancel

Name	Description
translationJob * required object (body)	The translation job model to resolve items for. Edit Value Model <pre>{ "Id": 0, "Title": "string", "AddedItems": [{ "IdRef": "string", "Title": "string", "ItemTypeWithSubtype": "string", "ResolveOptions": ["TranslateContainerItems"] }], "ApplicableActions": [{ "Type": "HateoasLink", "Href": "string", "Rel": "string", "Type": "string" }] }</pre>

Cancel

Support adding items to definition job

New endpoint *applicableJobs* added to support adding items into existing translation job in definition state

Returns list of jobs applicable for specified items

POST /api/v3.0/applicableJobs Gets an overview of translation jobs where a given set of items can be added to.

This operation returns an instance of 'TranslationJobOverview' type or one of the following inherited types:

- TranslationJob

Parameters Cancel

Name	Description
itemids * required array[string] (body)	The TCM/ECL URIs of items to add to a job. Edit Value Model <pre>["tcm:10-1653", "tcm:10-1654", "tcm:10-1655"]</pre>
jobType string (query)	If specified (not None), only return jobs of this type (Push/Pull). Parameter content type application/json None

Experience Space Application setting

Introduced *ExperienceSpace* Application setting

This setting will be used to store system wide customizable defaults for Experience Space, for example publish settings

Supports security where only system administrator can change or delete it

PUT

/api/v3.0/applicationSettings Saves application settings with specified application Id

Parameters

Cancel

Name	Description
applicationId * required string (query)	The id of an Application (case-insensitive). ExperienceSpace
applicationSettings * required object (body)	Edit Value Model <pre>{ "\$type": "Settings", "Data": { "TestSetting": "Test value", "NestedSettings": { "TestNestedSettings": 555 }, "PublishSettings": "RepublishOnly" }}</pre> Cancel

Parameter content type

Force finish workflow process

New endpoint *forceFinishProcess*

Used to force finish workflow process of the given activity or process instance

Exposed *finishProcess* applicable action in activity instance, that is used to determine if the user can finish or revert the process

POST `/api/v3.0/items/{escapedActivityOrProcessInstanceId}/forceFinishProcess` Force finishes a Workflow Process. ⤴

This operation returns an instance of 'ProcessHistory' type.

Parameters Try it out

Name	Description
escapedActivityOrProcessInstanceId * required string (path)	The escaped TCM URI of the Process Instance to finish or of an Activity Instance for which to finish the Process Instance it is part of. escapedActivityOrProcessInstanceId
approvalStatusId * required string (query)	The TCM URI of the Approval Status for all the items in the Workflow Process. approvalStatusId
returnFullProcessHistory boolean (query)	If set to true, the full Process History which is created by finishing the Workflow Process is returned. If false (the default), only its identifier is returned. <i>Default value : false</i> false

Responses Response content type **application/json**

Preview rendered content

New endpoint *render*

Used to get rendered content
source as it would be rendered
during publishing

GET `/api/v3.0/items/{escapedItemId}/render` Renders a given item. ⤴

This operation returns an instance of 'RenderedItem' type.

Parameters Try it out

Name	Description
escapedItemId * required string (path)	The escaped TCM/ECL URI of the item to render. escapedItemId
templateId string (query)	Optional TCM URI of a Template to render with. templateId
useDynamicVersion boolean (query)	Specifies whether the dynamic version of the item should be rendered (if applicable). <i>Default value : true</i> true

Responses Response content type **application/json**

Support workflow process definition editing

New endpoints

GET Workflow script types

GET Approval statuses

Rest API now has full support for workflow process definition editing

GET

/api/v3.0/workflowScriptTypes

Gets all workflow script types

⌵

This operation returns an instance of 'WorkflowScriptType' type.

Parameters

Cancel

No parameters

Execute

Clear

GET

/api/v3.0/approvalStatuses

Gets all Approval Statuses

⌵

This operation returns an instance of 'ApprovalStatus' type.

Parameters

Cancel

Name	Description
details	Specifies the level of details of list entries.
string	
(query)	IdAnd TitleOnly

Execute

Clear

06.

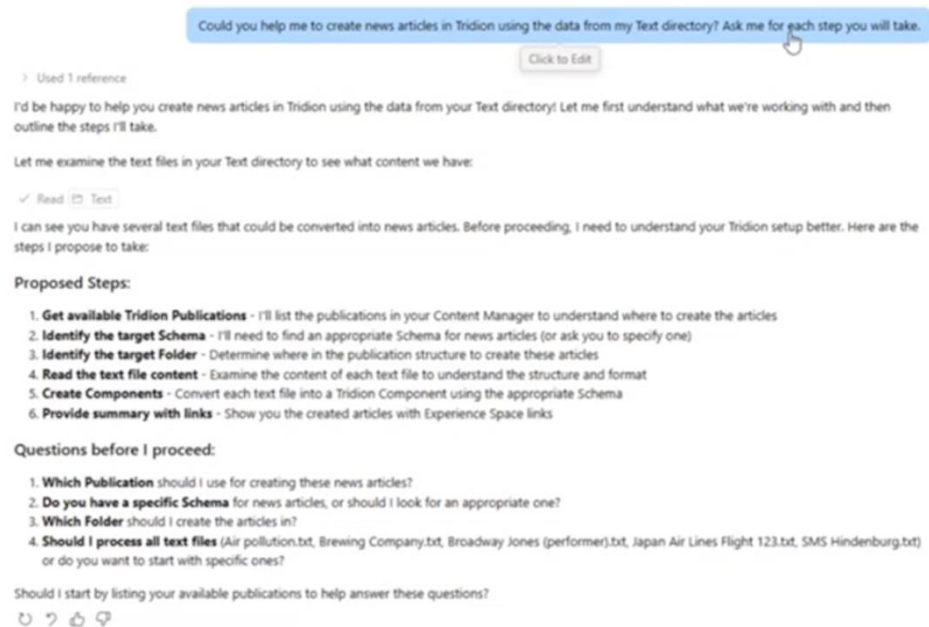

Recap Tridion Sites 10.1.3 April 2026

Several Updates
Available as a hotfix 😊

Model Context Protocol (MCP) Server

NEW

Context: someone drops a bunch of unstructured images and text files on your desktop and now you've got to go through and figure out how to get the content into Tridion....

- Analyze new content
- Match with appropriate schemas
- Propose a plan
- Validate with one case
- Repeat for the other cases

<https://tridion-videos.s3.us-west-1.amazonaws.com/tridion-sites/tridion-sites-10.5/Sites+10.5+-+MCP+Server.mp4>

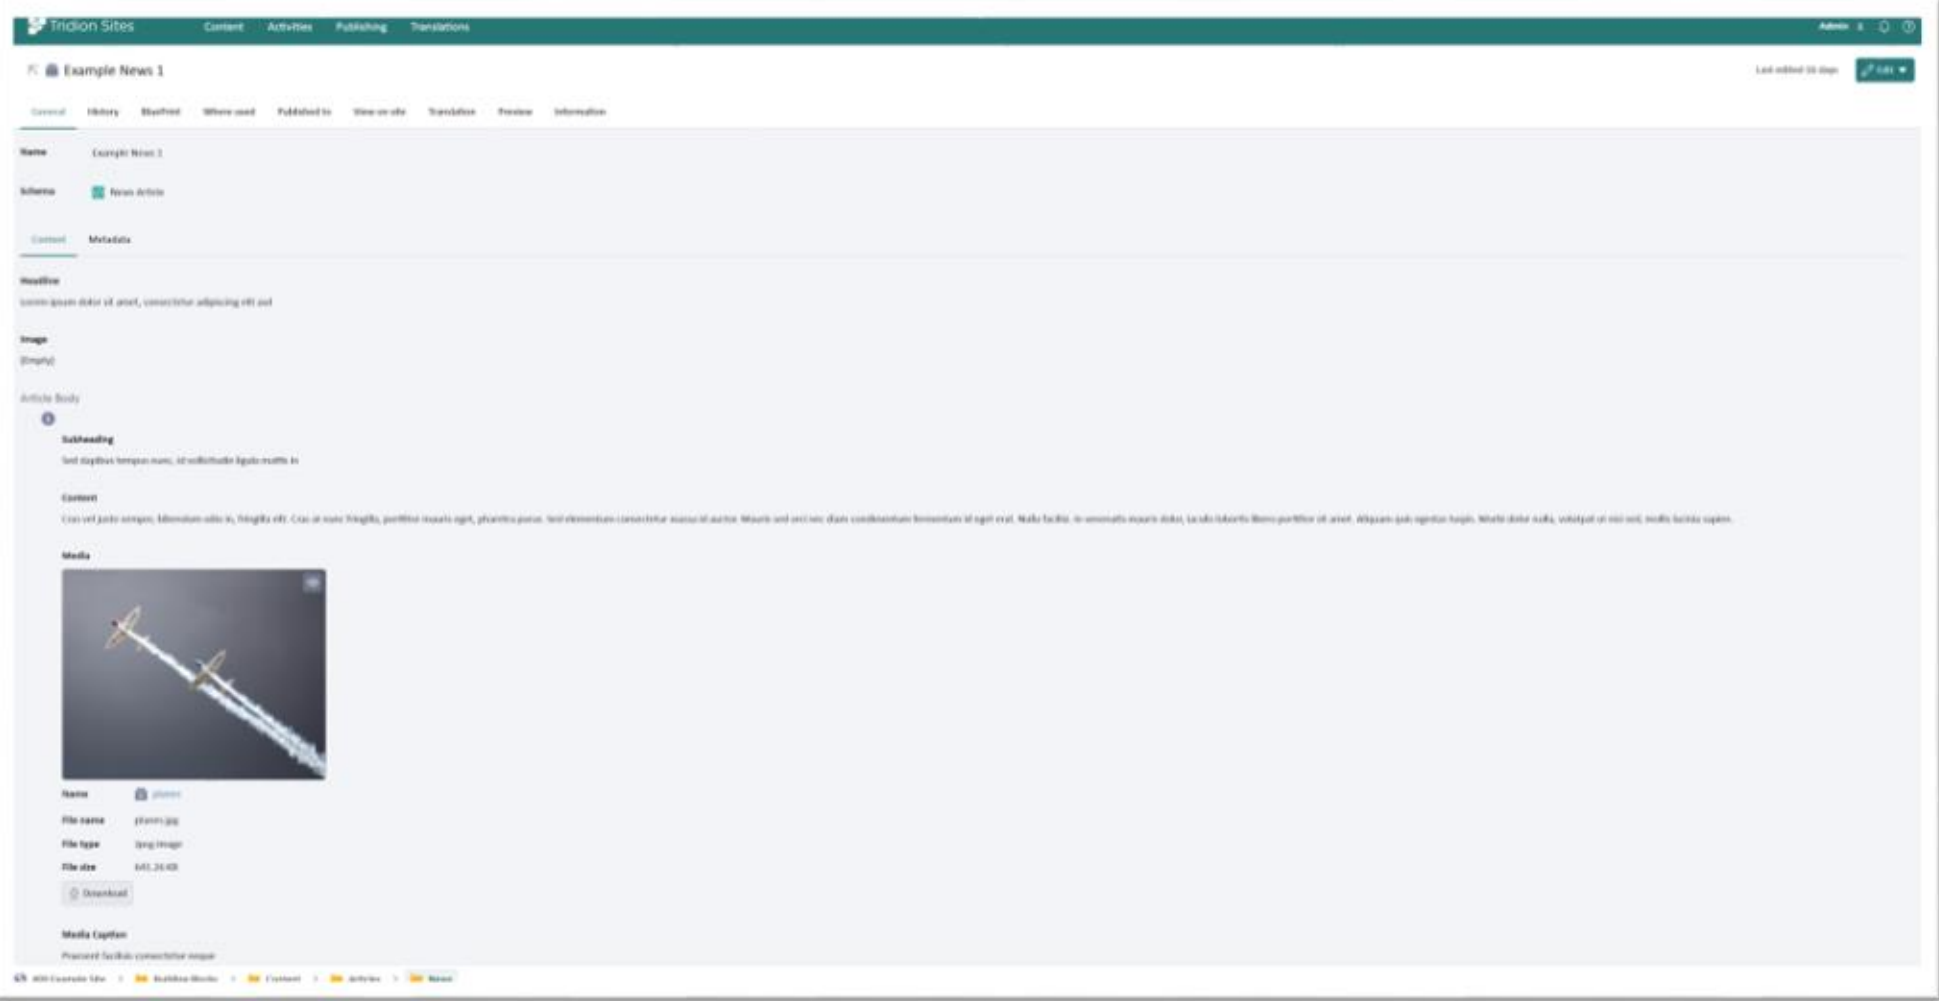

Translation job editor

- Replaced the Translation job modal with editor
- Added support for showing metadata fields for TM job

The screenshot displays the 'Tridion Sites' interface for editing a translation job. The top navigation bar includes 'Content', 'Activities', 'Publishing', and 'Translations'. The main header shows 'CF1 Submit Test' with 'Save' and 'Send for translation' buttons. The left sidebar has tabs for 'General', 'Added items', and 'Resolved items'. The main content area is divided into sections: 'Translation job name' (CF1 Submit Test), 'Date required' (Select date), and a list of checkboxes for 'Include previously translated items', 'Translate components and keywords', and 'Translate pages and organizational items'. Below these are tabs for 'Publications', 'Workflow', and 'Metadata'. The 'Metadata' tab is active, showing a 'A multi-line text field', 'A number field' (43), 'Text' (Enable options), and 'A keyword field'. The 'A keyword field' section contains a search bar and two columns of keyword options: 'Available options' (All Fields Test Keyword, New Keyword, New Keyword5, New Keyword6, New Keyword7, New Keyword8, New Keyword9, New Keywordt) and 'Selected options' (New Keyword2, New Keyword3, New Keyword4). At the bottom, there are 'Add' and 'Remove' buttons and a 'A date field' label.

Breadcrumb in Editors

Based on customer feedback, breadcrumbs are displayed in all editors to allow users to easily see the context.

Customizable default – Item selector

- When creating multiple new items via copy/paste, users may want to select linked items from a different location than used in the original (copied) item(s).
- In this scenario, defaulting to the location of the existing link can mean users need to repeatedly navigate to the new location.
- To address this, it's now possible to configure whether item selector displays the last visited location or the link's location.
- Setting 'prioritizeLastLocation' to true in application settings will change the behavior to match Classic UI. This is useful when editors want to replace links in a many components with components selected from a new location.

PUT /api/v3.0/applicationSettings Saves application settings with specified application Id

Parameters

Name	Description
applicationId * required string (query)	The id of an Application (case-insensitive). ExperienceSpace
applicationSettings * required object (body)	Edit Value Model <pre>{ "\$type": "Settings", "Data": { "defaults": { "publishing": { "targetTypeIds": [] }, "contentExplorer": { "browseAction": "openEditor" } }, "itemSelector": { "prioritizeLastLocation": "true" } }, "defaults_example": { "publishing": { "publishNewContent": false, "includeComponentLinks": true, "includeItemsInProgress": false, "includeCurrentPublication": true, "priority": "normal", "publishInChildPublications": true, "targetTypeIds": [] }, "contentExplorer": { "browseAction": "openEditorInNewTab" } } }</pre>

Cancel

Parameter content type

Group membership visibility

To simplify security troubleshooting, we've added the ability to copy Group memberships in the UI.

User can easily review recursive group memberships and scopes restricted to specific publications.

```
User: 'AMSLDAP\MMouse' (tcm:0-21-65552)
Description: 'Admin'
Has publish rights: yes
Is administrator: yes
Is publication administrator: yes
Group memberships:
  'Everyone' (tcm:0-1-65568)
  'Business Process Type Manager' (tcm:0-11-65568)
  'Developer' (tcm:0-19-65568)
    '110 DXA Site Type' (tcm:0-3-1)
    '200 Example Content' (tcm:0-4-1)
    '400 Example Site' (tcm:0-5-1)
    '300 slddemo content en-us' (tcm:0-6-1)
  'Information Designer' (tcm:0-4-65568)
    'Diamond Blueprint - 03 Source-Target A' (tcm:0-11-1)
    'Blueprint - DO NOT MODIFY OR DELETE' (tcm:0-19-1)
    'Blueprint Child - DO NOT MODIFY OR DELETE' (tcm:0-20-1)

BluePrint panel – show all localized items

- ‘Localized in’ tab currently displays items directly **localized from** the context item
- Unlocalizing these items makes them **shared from** the context item (they move to the ‘Shared in’ list).
- Items localized further down the hierarchy (i.e., descendants of a localized item) were not displayed.
- To see ALL localized descendants, 10.1.3 introduces a ‘Show all” toggle.
- This allows editors to see every item that may require an update or re-translation if the context item is modified.
- Requested by Acer but makes sense for as a general feature.

Graphene accessibility updates

New/Updated components:

- [New] Multiselect tree
- [New] Date picker
- [Updated] Select
- [Updated] Multiselect

And more:

- Added ability to **adjust height of TransferTree** and **TransferList** component using resize handle.
- Added **aria-describedby ARIA property** to input fields.
- **Show/hide functionality** for inputs.
- Title and role **attributes added** to ApplicationHeader.
- **~15 Bug fixes** in Graphene.

Our guidelines

Improved contrast = better visibility and readability for all users.
(WCAG 1.4.3 - Minimum contrast)

Better spacing = easier to read labels and click.
(WCAG 1.4.12 - Text spacing)

Focus state = supports keyboard navigation.
(WCAG 2.4.7 - Focus visible + 2.1.1 - Keyboard)

Interaction feedback = confirms interaction.
(WCAG 3.2.2 - on input)

Semantic HTML (<button>) = enhances screen reader and keyboard support.
(WCAG 1.3.1, 2.1.1, 4.1.2)

Appropriate ARIA labels = providing clear context and description for screen readers.

Version Compare

- Only show differences by default (make it configurable?)
- Compare across versions and blueprint (also structure groups, keywords, etc.)
- Toggle between rendered and raw XHTML view
- Item links (e.g., component, schema, keyword, etc.) are navigable
- Menu options for opening, rolling back to, or deleting historical version
- Improved performance when computing differences for large blocks of text
- Dropdown options can be filtered by title/URI (e.g., -v4)

Upgrade Considerations

09.

Platform and Product Upgrade Considerations

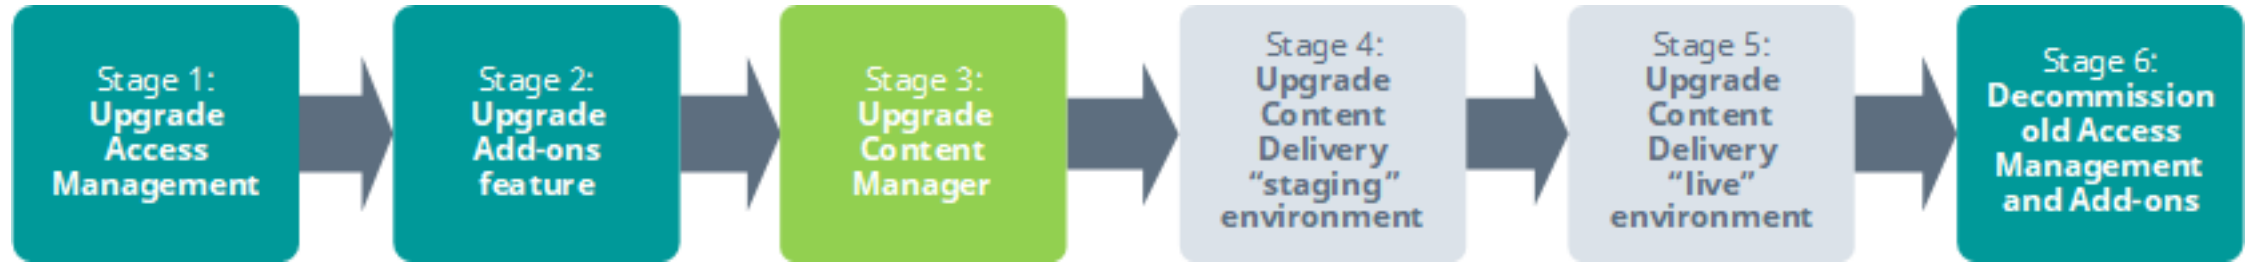

Upgrade overview

<https://docs.rws.com/en-US/tridion-sites-10-1-main-documentation-1174622/upgrading-tridion-sites-100494>

The 2 most common upgrade types are Staged and Rolling

The most important consideration is that if you wish to do a rolling upgrade it is always from the immediately preceding version. So for a rolling upgrade, you will have to go from **Sites 10 --> Sites 10.1**

Upgrade paths – Staged Upgrade

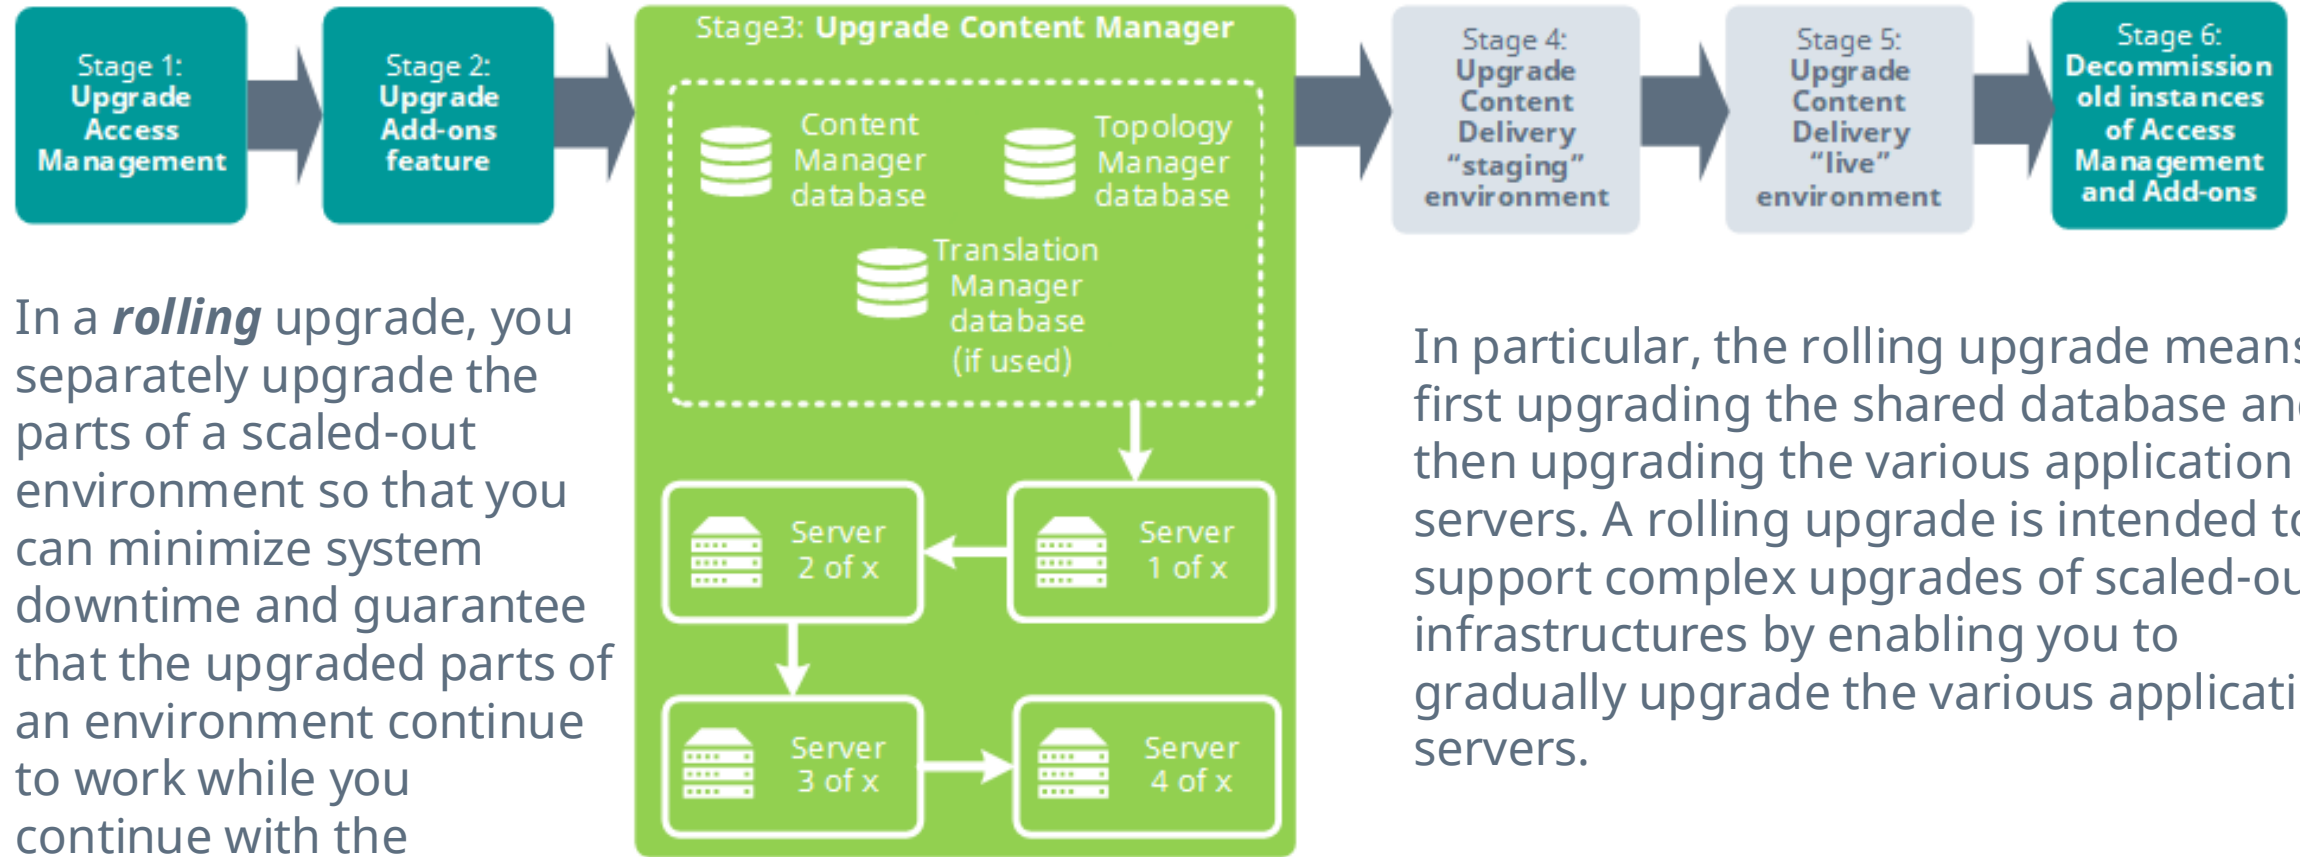

A ***staged*** upgrade is where you upgrade the different parts of your infrastructure at different times.

In a staged upgrade, you must upgrade Content Manager environment before you upgrade your Content Delivery environments.

After that, you can upgrade the individual Content Delivery environments in any order you wish.

Most organizations upgrade the product using a staged upgrade.

Upgrade paths – Rolling upgrade

In a **rolling** upgrade, you separately upgrade the parts of a scaled-out environment so that you can minimize system downtime and guarantee that the upgraded parts of an environment continue to work while you continue with the upgrade.

In particular, the rolling upgrade means first upgrading the shared database and then upgrading the various application servers. A rolling upgrade is intended to support complex upgrades of scaled-out infrastructures by enabling you to gradually upgrade the various application servers.

Functional and Technical Upgrade Considerations

Dynamic Experience Accelerator (DXA) Customers

For customers that are using the reference delivery application (DXA) there are some considerations:

- Sites 10 and Sites 10.1 require DXA 2.3
- Recommendation is to upgrade DXA 2.3 first and then update Content Management and then Content Delivery
- DXA 2.3 is backwards compatible with 9.1 and above
- Code:
 - <https://github.com/RWS/dxa-web-application-dotnet>
 - <https://github.com/RWS/dxa-web-application-java>

Move to Experience Space

In Sites 9.5, we introduced a brand new visual interface for content authors called, **Experience Space**. The old **Classic UI** is still available but we recommend that customers consider moving users to the new visual interface. It provides a modern editing experience and new features are being release only in **Experience Space**.

One factor to consider is that some customers have GUI extensions on the **Classic UI**. Our recommendation is to analyze:

1. Which extensions are no longer needed because the feature is supported natively
2. Which extensions are rarely used and can continue to live in the **Classic UI**
3. Which extensions should be migrated to **Experience Space** using the Extensions Framework that was introduced in Sites 10.

Streamlining the Content Model with BluePrinting 3.0

One consideration after your platform has been upgraded to Sites 10.1 is that BluePrinting 3.0 is going to allow for a far more efficient and simplified content model.

Our recommendation is to upgrade to 10.1 first but then leave some time to analyze which schemas can be streamlined using the new feature.

Our goal is that the conditional inheritance feature of BluePrinting 3.0 will allow for multiple schemas to be consolidated into a single one and will optimize scenarios for components that have both centralized and localized fields.

Moving to Trados Enterprise for Translations

While Tridion Sites 10.1 is still going to support integrations to TMS and WorldServer, we recommend moving to Trados Enterprise. It is a very modern platform that easily incorporates with AI linguistic tools like RWS Language Weaver.

Moving forward new features are going to be developed on Trados Enterprise so we recommend that customers start to make the move to the platforms. Some benefits of making the move:

1. Trados Enterprise has many **more features** for both translators and managers.
2. Trados Enterprise can better take advantage of machine translation (with or without human post-edit) to **lower translation costs**.
3. Trados Enterprise with the new Evolve capability can increase the **translation quality** by using AI tools.

Going Headless

Although Tridion has had a headless content hub since 9.0, it was really with the 9.6 release which introduced Semantic Content Models and Template-less Publishing that paved the way for a new and simpler way to work with Tridion's JSON output and the JavaScript frameworks like React, Vue, and Angular.

To go headless, customer will need to install the Dynamic Experience Delivery (DXD) content hub and then ensure that schema fields are set to publishable.

Access Management

If your organization has not yet migrated to the Access Management platform, you may consider doing so as part of the upgrade. This will allow you to take advantage of the new features allowing you to connect to various Identity Providers and better manage security across your Tridion Sites eco-system.

Documentation on how to proceed here:

<https://docs.rws.com/en-US/tridion-sites-10-1-main-documentation-1174622/tridion-access-management-768664>

Integration Framework and Extensions

The Integration Framework was released in Tridion Sites 9.1 and the Extension Framework was released in 10. One of Tridion's key benefits is that it is a platform that can be extended to provide a unique solution for your organization.

As part of the upgrade we recommend taking a look to see if there is any “low-hanging fruit” that could be integrated into the platform.
